Interpump Group S.p.A. is an Italian-based, multinational organization that consists of 120 companies in 40 countries, with an impact spanning across the world. Interpump Group is known for being the world's largest producer of professional high-pressure piston pumps as well as the largest manufacturer of power take-offs. Interpump Group is also one of the largest international players in the water-jetting, flow handling, hydraulics, and power transmission markets.

Interpump Group continues to grow its footprint in North America through new acquisitions and empowering sustainable brands. In North America, five companies make Interpump Group a leader in the North American PTO, hydraulic, and power transmission markets. These organizations include Hydra Dyne Tech, Muncie Power, RR USA, Walvoil, and White Drive Motors & Steering. Together, these companies provide a wide breadth of high-quality solutions for several industries across North America.

hydradynetech.com

ABOUT

Hydra Dyne Technology designs and manufactures custom hydraulic components for heavy-duty, off-road equipment.

The company makes some of the world's most reliable rotary joints, hydraulic cylinders, accumulators, and block manifolds that use our unique LocSeal™ technology.

CRANE

ACCUMULATORS

Our accumulators are CRN certified and manufactured to the highest standards. The unique taper lock technology supports quick installation and ease of serviceability, while ensuring a secure locking mechanism. Hydra Dyne Tech's piston accumulators feature a double sealing system and are rated for use at pressures up to 5,000 PSI (345 BAR), making them suitable for use in a wide range of applications.

BLOCK MANIFOLDS

Block manifolds are an essential component in hydraulic systems, and we offer a spectrum of options to meet the specific needs of each application. For more complex and customized systems, HIC designs are available that can be tailored to perform a variety of functions. Block manifolds are available in a range of materials, including aluminum, steel, and ductile iron.

CYLINDERS

Hydra Dyne Tech designs and manufactures a wide range of heavy-duty double-acting cylinders to handle the most demanding tasks. There are a number of customization options available to meet your specific needs, including welding options and sensor integration options. These hydraulic cylinders are an ideal choice for a wide range of applications.

ELECTRICAL SLIP RINGS

Our unique and compact stackable-cassette style electric slip ring design can be easily integrated into the rotary manifold and features a built-in rotary position sensor for precise monitoring. They also feature reliable signal and data transmission for effective performance—even in harsh environments. The sturdy, aluminum enclosure with sealing provides durability, and the modular design makes it easy to service and maintain the life of the electrical slip ring.

ROTARY JOINTS

Our rotary manifolds are designed to provide industry-leading performance and reliability and are available in a range of standard and custom configurations. Their innovative design features direct barrel porting, allowing for maximum flow efficiency, and the patented LocSeal™ technology used in the construction of rotary manifolds provides superior seal life.

ABOUT

Muncie Power is a leading manufacturer of power take-offs, hydraulic tanks, snow and ice solutions, and fluid power components for numerous North American markets.

In addition to our manufactured products, Muncie Power is also the sole provider of both Interpump Hydraulics and Interpump Fluid Solutions in North America, allowing us to expand our PTO and hydraulic offerings as well as provide a complete line of fluid conveyance products.

POWER TAKE-OFFS

Complete line of high-quality PTO solutions for all popular transmissions within North America, including Aisin, Allison, Detroit, Eaton, Ford, Mack, PACCAR, RAM, and Volvo.

HYDRAULIC PUMPS

Our vast product portfolio of hydraulic pumps includes gear pumps, dump pumps, piston pumps, vane pumps, clutch pumps, and DIN mount pumps to power several vocational truck application.

CYLINDERS & TIPPER VALVES

We offer a wide variety of high-quality telescopic cylinders in both Pin-pin and Trunnion Mounting styles, along with robust tipper valve solutions.

TANKS

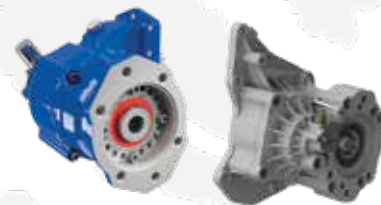

Muncie Power offers a wide range of tanks, including hydraulic (7–100 gal.), transfer (50–120 gal.), and reefer tanks (35–100 gal.), all available in various mounting styles and sizes. We can also provide the necessary installation hardware. If a standard tank doesn't fit your requirements, we can also customize tanks for your application.

FLUID CONVEYANCE

A complete line of Interpump hydraulic hose, fittings, and adapters that are engineered to work together. Braided, spiral, suction, and specialty hose options are available for extensive market coverage.

SNOW & ICE SYSTEMS

A variety of snow and ice control systems to meet the needs of various snow removal applications. Full product range including electronic spread controls, integrated electro-hydraulic systems, and customized solutions.

ABOUT

Since 1985, RR USA has supplied the North American market with a variety of mechanical, hydraulic, and electrical components used in several industries. Our services include stocking, package assemblies, repair, engineered solutions, design, product development, and component selection.

We are dedicated to providing our customers with the same level of excellent service and unparalleled products they are accustomed to across our three locations in North America. Through our headquarters located in Boothwyn, Pennsylvania, our west coast branch in Monroe, Washington, and RR Canada, located in Concord, Ontario, we continue to supply stocking for production and service parts, complete packaged assemblies, repair, design, and engineering solutions.

PLANETARY GEAR REDUCERS

A complete line of planetary gear reducers, including the 2000 Series and our Plus Series. The 2000 Series—our longest and most popular—is highly customizable, while the Plus Series uses our most advanced technology to guarantee maximum performance. We also have combined gear units for heavy industrial applications available.

HELICAL GEARBOXES & WORM DRIVES

Our helical, bevel-helical gears, and worm drives are our state-of-the-art products. Each unit is tailor-made to the customer's requirements. All our gearboxes are designed, developed, and manufactured using our advanced technical resources. These gearboxes come in different sizes, ratios, with metric and imperial shafts, steel or high-grade cast iron housings, solid or hollow output shafts, and customized input connections for electric motors.

PLANETARY WHEEL DRIVES

Our wheel drives are suitable for the most demanding applications. The compact design guarantees high performance along with durability. They are designed to work with both electric and hydraulic prime movers. We offer our wheel drives in 18 different sizes, with a broad range of ratios that allow our products to be a perfect fit for high axial and radial load applications.

SWING DRIVES

Our swing drives are ideal for truck cranes, excavators, off-shore cranes, wind turbines, and aerial working platforms. They feature large bearings and stronger output supports for additional radial and axial load capacity. The peak torque ranges from 1,200 Nm to 210,000 Nm.

HYDRAULIC MOTORS & VALVES

RR USA offers a wide selection of high-quality fixed and variable displacement motors as well as valves for nearly every popular application with a broad range of displacement options.

ABOUT

Walvoil, a leading manufacturer of integrated hydraulic products, electronics, and complete mechatronics systems, has been driving the future of motion power for over 50 years. Since its establishment in North America in 2004, the company has expanded its production and commercial operations to Canada and Mexico. Additionally, since 2015, Walvoil has represented Interpump Group's Valves Division.

DIRECTIONAL CONTROL VALVES

Monoblock and sectional valves, open center circuit configurations, load sensing, and full flow sharing valves are designed to meet all your needs. Customized valve setups are available for special applications, covering the simplest to the most sophisticated applications.

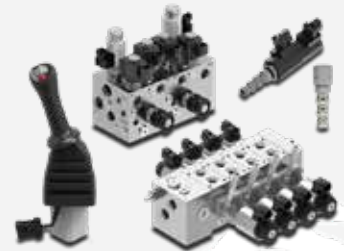

PUMPS & MOTORS

A wide range of gear pumps and motors—in both aluminum and cast iron—can be configured with standard and special flanges and shafts. Our piston pumps guarantee all the necessary features for a new generation of mobile hydraulic pumps. Walvoil's pumps and motors also feature sensors, compact tandems, and various control manifolds.

COMPACT HYDRAULICS

Our compact hydraulics consist of a range of SAE cartridge valves and parts in body, fully customizable HICs, manual and electric diverter valves, bankable solenoid valves (on-off and proportional types), and remote controls.

ELECTRONIC COMPONENTS

We offer a wide range of electronic devices, including proportional joysticks, control units, multi-functional handles, software integration, and complete systems.

HYDRAULIC DIGITAL SOLUTIONS

The modern mobile machinery market requires a continuous boost in productivity and performance. At the same time, it is essential to lower operating costs, enhance efficiency, and reduce emissions to promote sustainability and social responsibility.

Walvoil's new Hydraulic Digital Solutions focus on energy efficiency, zero emissions, safety function architectures, mobile hydraulics automation, and enhanced connectivity and human interface control.

ABOUT

White is a global leader in designing, developing, and manufacturing orbital motors and steering solutions. With decades of experience, we cater to various industries, including agriculture, construction, mining, forestry, material handling, and road building.

Our modern manufacturing facilities in the United States and Poland, combined with our advanced Global R&D Laboratory, enable us to deliver innovative solutions tailored to the unique needs of our customers.

ORBITAL MOTORS

White offers a complete range of orbital motors, including solutions capable of delivering up to 80kW of power, offering reliable performance for both small-scale and large-scale applications.

STEERING SOLUTIONS

Our comprehensive portfolio of steering solutions features a wide array of options, offering a diverse range of displacements from 32 to 985 ccm per turn.

ELECTROHYDRAULIC STEERING

The SBX steering solution is tailored for autonomous and advanced vehicles, providing flexibility, precision, and smart features. Its modular design enables easy customization, self-diagnostics, and parameter adjustments for various vehicle types and applications.

PRIORITY VALVES

LPS priority valves, used in conjunction with LS steering units, offer a reliable and energy-saving hydraulic system. Pilot pressure-damping and relief valves are available as an option to increase system stability.
