

ELIMINATE THE TORQUE SPIKE

with the
MUNCIE START®

MUNCIE START® is an electronically controlled, modulated clutch engagement system by Muncie Power. It eliminates torque spikes through the power take-off, truck drivetrain, and mounted auxiliary equipment during startup of high-inertia loads. By allowing for smooth engagement of the power take-off, Muncie Start extends the life of both the PTO and driven mechanical components.

APPLICABLE PTOS
