

MUNCIE POWER PRODUCTS

## Product Bulletin #00032

**Subject: 2016 MY Ford F650/ 750 truck with Muncie FR66 PTO**

Date: February 19, 2016

URL: [www.munciepower.com](http://www.munciepower.com)

---

For model year 2016, Ford has changed the wire pin connections on F650/750 chassis, resulting in necessary changes to the FR66 PTO wiring harness. See Muncie PTO application page Ford-10 for information.

Note that the FR66 shift codes represent Gas or Diesel engine specific installation \ wiring harness kits and should not be misapplied  
Gas – “G or F” codes only                      Diesel – “D or 6” codes only

This bulletin is to emphasize the correct PTO model codes for the 2016 model year Ford medium duty trucks (F650/750):

Gas - FR66-F1209-F3\*\* , includes p/n 34T43650 wiring harness.

Diesel - FR66-F1209-63\*\* , includes p/n 34T43179 wiring harness.

**FR66 units with the "G" or "D" shift codes should not be used on 2016 model year F650/750 trucks.** If these are used the communication to the Ford ECU will not be completed thus preventing the vehicles PTO system from operating. If an FR66 "G" shift is to be installed, then the 34T43650 wiring harness (sold separately) will need to be utilized. If an FR66 "D" shift option is to be installed, then the 34T43179 wiring harness (sold separately) must be utilized.
