

MUNCIE POWER PRODUCTS

Product Bulletin #00061

Subject: PTO Series Obsoleted

Date: September 28, 2018

URL: www.munciepower.com

This bulletin is to announce the obsolescence of the Muncie 83, A1, CD30, GA, GB10 - 60, GBFR, GM, RG, and SG series PTOs. This will be effective immediately.

The Muncie 83, A1, CD30, GA, GB10 - 60, GBFR, GM, RG, and SG series PTOs are no longer offered for sale as an assembly. Service parts, which are machined, will be available for the next 3 years or until Inventory Is depleted. Other service parts, like bearings, seals, etc., will continue to be available.

In certain instances, the A1 or SG series PTO might be replaced with the Muncie TG series. Clearance, output shaft connection, and output shaft rotation would need to be considered for each replacement.

Because the SG series has been obsoleted, this requires that the GB10, GB30, GB40, and GB60 series to be obsoleted, since the SG is a component in those gearboxes.

The 83, GA, GBFR, GM, and RG series do not have a PTO replacement.

The CD30 may be replaced by the CD40 depending on the available matching unit.

These PTO series have been removed from the Muncie application catalog, both the printed and electronic version.

Complete models are no longer available for ordering as of this date.

Contact Muncie Customer Service for more Information.

PTO assemblies:

Muncie Power Products will NOT consider parts/units returnable without prior review and authorization.
