Product Bulletin #00084

Subject: New TITAN® MC1 “ZB” Output

Date: 2/25/2020

URL: www.munciepower.com

A new output option is now available for the TITAN® MC1 Series PTO.

The new “ZB” output is designed to fit direct mount hydraulic pump applications with a combination SAE C shaft / SAE B flange mounting. This new option eliminates the interference issue that was present on the “CB” output, which prevented the pump from mounting flush with the PTO output flange.

The full model code for this option is MC1-A10**-***ZB**. This code is in the process of being added to all MC1 literature.

Please note that XSMC shaft extensions will continue to use the “CB” output code.
