## Product Bulletin #00107

### **Subject: PTO Series Obsolescence**

Date: May 4, 2022

---

This product bulletin is to announce the obsolescence of the Muncie Power Products' FR66, FR66 Rev A, FA64, CD05, CD10 and MC1 PTO series, as well as all 49TA, XD10, and XS24 shaft extension assemblies for CD10 and CS24. This will be effective immediately.

The Muncie Power FR66, FR66 Rev A, FA64, CD05, and CD10 PTO series are no longer offered for sale as an assembly. All CD10 and CS24 series shaft extensions (49TA, XD10, and XS24) are also no longer offered for sale. Service parts, which are machined, will be available for the next 3 years, or until inventory is depleted. Other service parts, like bearings, seals, etc., will continue to be available.

The FR66 and FR66 Rev A PTO series can both be replaced by the FR6Q Series PTO. The FR6Q Series is a direct replacement for both.

The CD05 and CD10 series can typically be replaced by the A30 Series PTO. Some applications using the CD05 Series may not be able to use the A30 Series, due to clearance issues on the chassis. The A30 Series is longer than the CD05 and CD10 series, so adjustments to drivelines and/or pump support brackets may be required.

The MC1 Series PTO can be replaced with the A20 Series PTO. The A20 Series is a direct replacement.

There is no replacement PTO available for the FA64 Series.

Shaft extensions for the CD10 and CS24 series are also being obsoleted. The following list shows all affected 49TA#### part numbers. All EX Drive shaft extensions beginning with prefixes of XD10 and XS24 are also being obsoleted.

Any CD10 or CS24 series shaft extension applications that require replacement of the PTO or shaft extension will need to be converted to an A30 or A20 series PTO with the appropriate XSMC shaft extension.

These obsoleted series have been removed from the Muncie Power application catalog, including both the printed and electronic versions.

Complete models are no longer available for ordering as of this date.
