## Product Bulletin #00116

### **Subject: ASCS-106 Combo Kit Air Console**

Date: August 23, 2023

URL: [www.munciepower.com](http://www.munciepower.com)

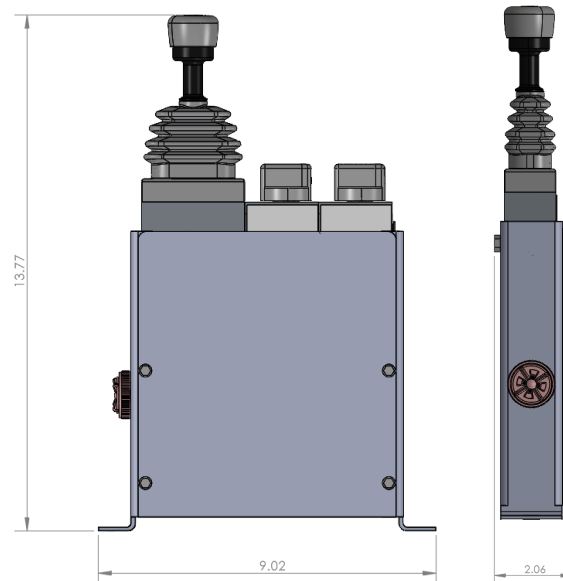

---

The ASCS-106 is the new Combo Kit air console replacing the ASCS-105. The old air valve, 35T35898P1, used in the ASCS-105 has been discontinued, making it and the ASCS-105 obsolete. Remaining service parts for the ASCS-105 will be available until inventory is depleted.

The new air valve, 35T67071, looks the same with some minor differences. It functions the same and it installs the same as the old valve. **Note:** The 35T67071 will not fit in the old console housing.

The difference is the PTO and auxiliary valve sections. They are each a little wider requiring a new wider console housing. The new ASCS-106 console assembly overall is 0.65" wider at 9.02" and is 0.47" taller at 13.77". The depth or thickness remains the same.

One advantage of the new valve is that the PTO and auxiliary valve sections can be added, removed, or rearranged as needed without special length bolts and port plugs.
